

PLANT THE SEED REINVENT

This dynamic programme enlightens young minds around how to be water and eco-wise, close loops and turn trash into treasure. Our practical approach allows them to get their hands dirty as they learn how to make their homes and schools more holistic and sustainable.

WHAT MAKES US DIFFERENT TO OTHER PROGRAMMES?

- Practical and hands-on
- Engaging and interactive
- Learner centred approach
- Facilitators are young, passionate, entrepreneurial and active
- Future-orientated, topical themes and content

PROGRAMME OPTIONS

1-Day During School Programme

Grade 4-7
Grade 9-10

6 Experiential workshops
08:00 - 14:00 (5 hours)

3-Day After School Programme

Grade 4-7
Grade 9-10

6 Experiential workshops
1h 45min each day

WHO SHOULD DO THIS PROGRAMME?

Grade 4-7 learners
Grade 9-10 learners

Programme can be customised to suit other grades.

WHY DID WE DESIGN THIS PROGRAMME?

• Learners lack a holistic understanding of what sustainability is.

• Few learners are aware of how their lifestyle habits of consumption and disposal negatively impact our environment and are seldom given the opportunity to think critically about this.

• There is a need for platforms where learners can be taught how to become solutionaries and be empowered to develop systems that will make their homes and schools more sustainable.

HOW WILL THIS PROGRAMME PLANT THE SEED?

Benefits for learners:

Learners are given a holistic introduction to sustainability and walk away with practical knowledge on how to live more sustainable lifestyles, both at home and at school. Learners get their 'hands dirty' and practically engage with creating solutions to manage food and water wastage. They engage with the concept of feedback loops and how to close more loops through simple everyday actions. They learn how to calculate their carbon footprints and decrease their impact on our eco-system. The programme provides agency within learners to become 'activated' in sustainability efforts, as they are equipped to better engage with issues of waste, food and water in their communities.

Benefits for teachers:

The platform enables teachers to practically engage their learners and expose them to positive role models, whilst fulfilling CAPS curriculum needs for various subjects.

Benefits for your school:

The programme assists schools in raising a generation of solutionaries for climate change. It starts with their exposure to our dynamic group of young environmental entrepreneurs, who are creating solutions for sustainability. Schools are left with fully functioning GroPro vertical garden worm farms. Our workshops are run on school grounds by a team of facilitators who manage the entire day to ensure a smooth process - this saves the school on transport logistics and on the day coordination. Educational posters with practical tips for sustainability are also provided for the classroom.

We are here to help you build a new generation of youth who are conscious, connected, and courageous.
